Earlier-donor coupling is suggestive; RF sign and physical mechanism remain unverified
All 362 primary histories; outliers preserved
Donor timing acceleration (samples/s²)
(sample rate / actual RF) × donor CFO slope (samples/s²)
Empirical positive-sign unit relation
Conditional regression uncertainty; RF scale uncalibrated
Fraction of 362 histories
Coefficient SE with engineering noise floors (samples/s²)
Timing acceleration
Difference from RF-scaled CFO slope
