

All-track location search: error distributions by capture rate

Pre-rotation · 23 Sep 2026, 06:39:14–14:39:14 UTC

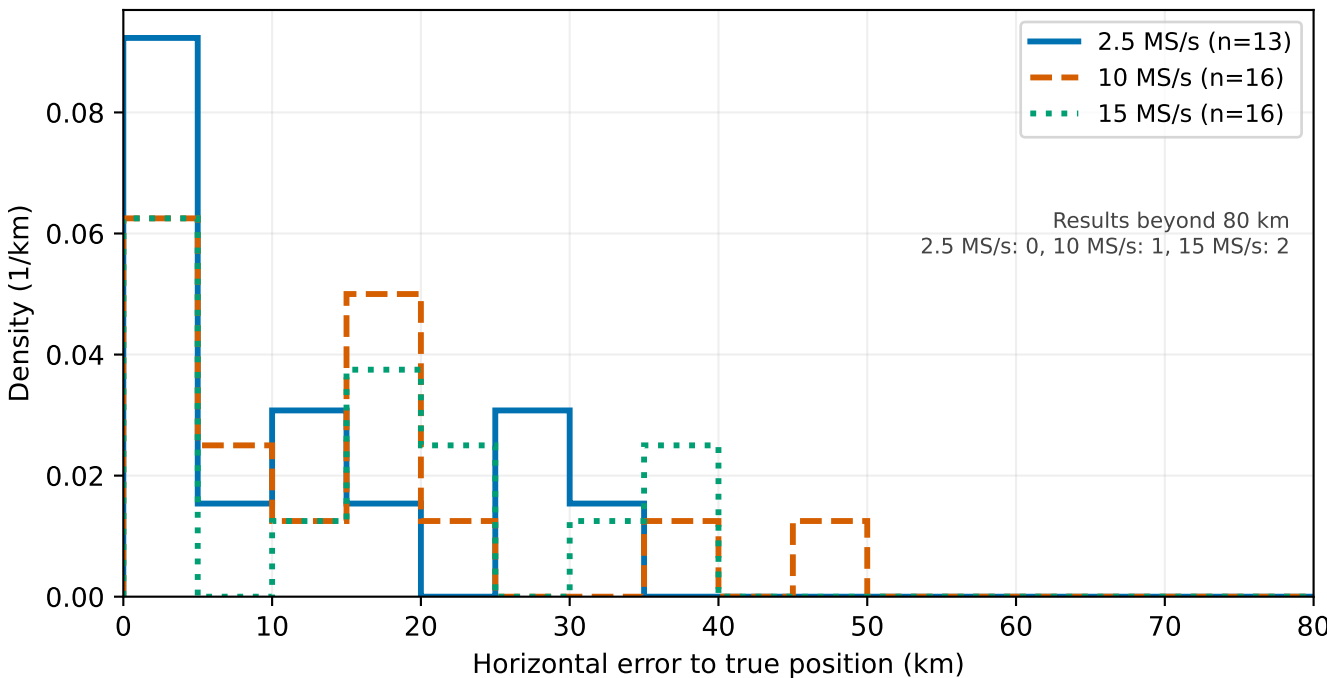

Sacramento prior · Close-up: 0–80 km
5 km bins

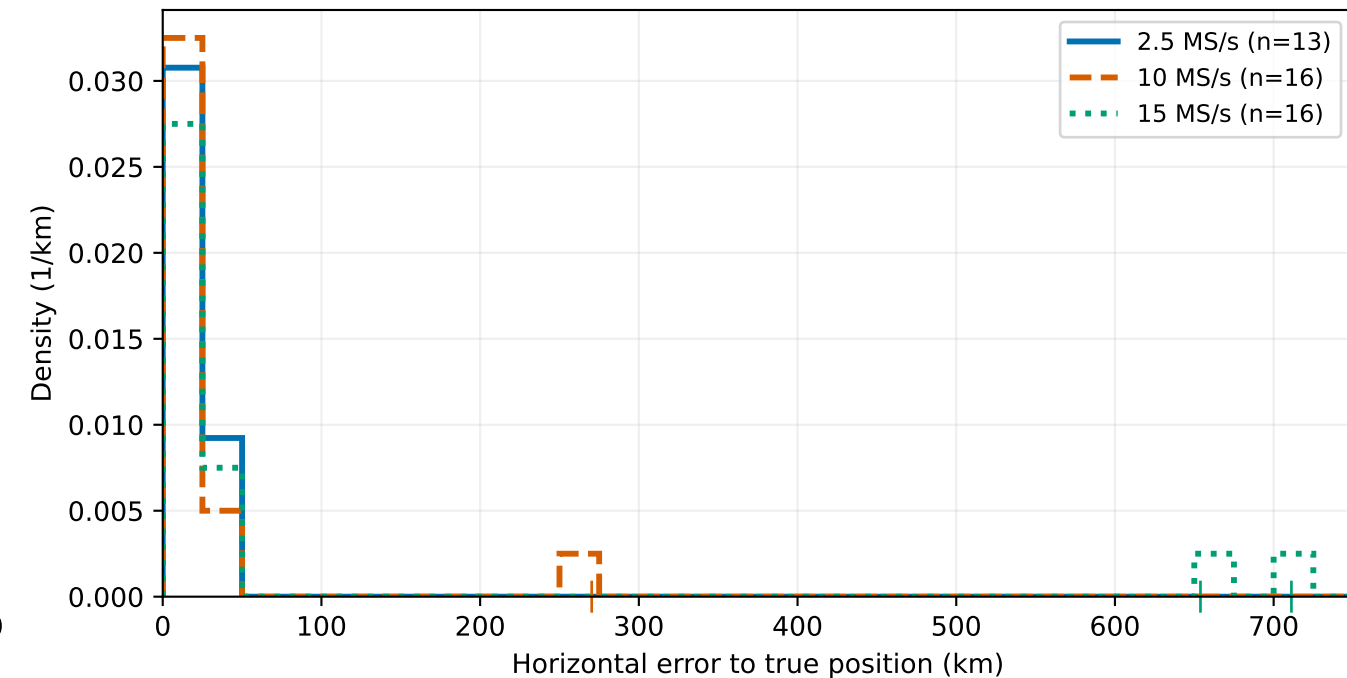

Sacramento prior · Full range: 0–750 km
25 km bins

Reno prior · Close-up: 0–80 km
5 km bins

Reno prior · Full range: 0–750 km
25 km bins

45 of 48 recordings have results; each curve integrates to 1 over the full range. Close-ups retain full-sample normalization.
One selected location per recording and prior; 100 → 50 → 25 → 12.5 km search, 400-point budget. Empirical densities, not position-confidence distributions.
