Fitted c: target CFO and phase-integrated residuals at experimental endpoints
DS24-0095 / model family 65500
DS24-0087 / model family 57752
Unqualified source: 49 native points
Zero shape covariance
Physical shape prior
Native CFO (kHz)
Scan time (s)
Residual before target-local adjustments (Hz)
Native-gauge prediction: phase-posterior orbit mean plus parent radio/E-conditional mean; target constant/shape mean adjustments are omitted.
This is a descriptive residual, not full-fit RMS or held-out prediction. Target data condition phase; no calibrated orbit correction is claimed.
